

The National Education Association (NEA) is telling all their members and affiliates to create **Gender Inclusive Schools**. What is a Gender Inclusive School? First you need to know that the term 'gender' has been expanded. If you thought it was just male and female, then you are a troglodyte and you are not hip.

Educators have decided that gender identity is a learned behavior.

Little girls act like little girls because their parents and the society at large has cast them in that role and the union wants to "free" the children from those societal assignments of gender behaviors.

Of course your five year-old doesn't really understand sexuality so the schools will have to teach them about the differences between males, females, gays, lesbians, transsexuals, bisexuals, etc. so that the child can **choose** which gender they think they are.

This **movement** for gender fluidity will release the children to let their inner genders out.

The teacher's union – NEA, partnering with *Gender Spectrum* is providing guidance to educators to fully immerse children as young as 3 years old and all through high school in gender knowledge and gender creativity. What gender do you identify as today? No problem, you can change it tomorrow.

Idaho Eagle Forum mobilizing with other family oriented and family friendly groups across the nation to keep this twisted political agenda out of our pre- and K-12 schools. To say that it is inappropriate is a gross understatement. This agenda of introducing gender confusion to young children will bring mental illness to otherwise healthy, normal children. We can't allow that to happen – not for any reason.

The NEA is holding their annual Representative Assembly meeting in Houston, Texas, July 4-7, 2019. Show up if you can and tell them what you think.

Please copy and distribute this flyer far and wide. It can be found at our new website: <http://IdahoEagleForum.org>
